## **Chemtrail controversy making the mainstream**

### **Evidence mounting that government projects causing poison clouds**

**by A.C. Griffith**

We will talk about four active projects ongoing in the atmosphere across America now.

The first project is an effort to block the rays of the sun from hitting the earth including the ultra violet radiation that will come through without an adequate layer of ozone in the upper regions above the earth. This, it is hoped, will lower temperature on the surface of the earth and block ultra violet radiation from causing skin cancer in humans. The aerosol is probably aluminum oxide or a compound that would have similar properties.

The second and most secretive project is the United States Navy's, RFMP, Radio Frequency Mission Planner, military program. The RFMP is the system name given to a group of computer programs and one of the supporting, subprograms within the RFMP system is called the VTRPE computer program. VTRPE is an acronym that stands for Variable Terrain Radio Parabolic Equation, It is a computer Radio Frequency propagation program that deals with radio waves and enables the RFMP system to visually see the battlefield terrain in 3 dimensions (3-D) on a television screen. The RFMP system also depends on satellites to feed their images of the battlefield into the RFMP system to be combined with the battlefield picture painted from the ground thus producing 3-D images.

By providing an extremely interactive and visual (television type radar screens) environment, the Radio Frequency Mission Planner, RFMP system allows the computer operator to develop familiarity with the "Radio Frequency" environment before a battlefield war mission occurs by playing a variety of "what-if" virtual warfare scenarios on his computer screen. Since all major modes of Radio Frequency propagation are modeled in his computer, (RFMP system), special, sometimes counter- intuitive, cases can be examined in detail and exploited during a warfare battle mission.

The VTRPE computer program only worked accurately over water and along coastal areas but not over land masses because the system's radar waves required an atmospheric condition known as "ducting", over land, to operate accurately.

Radar display with "ducting"

The government and military solved the "ducting" problem by releasing an aerosol, a mixture of barium salts into the atmosphere over America. They made an atmospheric RF duct with a base of barium aerosol from aircraft. The chemical and electrical

characteristics of the mixture will cause water moisture to stay in clouds. Again, the aerosol sets up an electrical and chemical environment that supports RF ducting for the RFMP / VTRPE warfare system. Fibers with barium may support ducting. The mixture of barium salt aerosol when sprayed in a straight line will also provide a ducting path from point A to point B and will enable high frequency communications along that path, even over the curvature of the earth, in both directions. Enemy high frequency communications can be monitored easier with the straight line A to B ducting medium.

The third project also utilizes the mixture of barium salts in the atmosphere. Weather control is a project of the U.S. Air Force and utilizes Nikola Tesla concepts of radio frequency radiation (HAARP) against the ionosphere above the earth. Fragile life support systems in our environment are being manipulated, tested and altered by government for military advantage. Air Force documents implied, "the risks are high but the rewards are worth it." The mixture of barium salts, supporting moisture, is encouraged along the weather fronts and manipulated in a control fashion. It is believed microwave energy is also utilized in the weather control program. Weather data is also a required input to the VTRPE program of the RFMP system. Perfected weather control technology will enable a military to withhold rain, cause floods, cause drought, cause storms, withhold sunshine, damage food crops, and bring any country to its knees without firing a shot.

The fourth project in the atmosphere is the DARPA, Defense Advanced Research Projects Agency, biological detection and decontamination programs. The program also utilizes the mixture of barium salts as the base vehicle in aerosol along with special polymer fibers in the atmosphere. There is reason to believe biologicals have been released into the atmosphere in trials, testing the systems.

It is believed that barium salt, polymer fibers and other chemicals, in the atmosphere are the physical irritants that are either directly or indirectly responsible, for the recent nationwide epidemic increase in cases of nose bleed, asthma, allergies, pneumonia, upper respiratory symptoms and a noticeable increase in arthritis symptoms, recently reported nationwide.

Chemicals illegally sprayed into the atmosphere are producing atmospheric and ground conditions detrimental to human and animal health but favorable to the growth of harmful molds / fungus. These conditions are not conducive to good health. The soluble salts of barium, an earth metal, are toxic in mammalian systems. They are absorbed rapidly from the gastrointestinal tract and are deposited in the muscles, lungs, and bone. No case data is available from the medical community on the long term effects of barium in the human body.

The programs are secret because the Federal EPA and State Environmental Quality Agencies need to "not know" about what the by-products of the metabolites of biological, illegal and harmful agents are. It's for that reason the project has been declared secret from the citizens.
